

ABSTRACT OF THE DISCLOSURE

The body of a herbaceous plant, *Cistanche tubulosa* (Schenk.)
Wight, is used to make a medicinal preparation containing phenylethanoid
glycosides and comprising 10-70% of echinacoside by weight of the
5 preparation and 1-40% of acteoside by weight of the preparation. The
medicinal preparation is used as an active ingredient of medicinal
composition for use in prevention of senile dementia, and inhibition of
aggregation of blood platelets.
